

Password Reset and Account Recovery: Complete PDF Guide

Article: Resetting Your Password via Email Link

This guide explains the official password recovery process used across all customer accounts. Follow these steps in exact order to regain access to a locked-out account.

- 1 Navigate to the official login page at app.example.com/login.
- 2 Locate and click the text link labeled 'Forgot your password?' positioned directly beneath the password input field.
- 3 Enter the email address that is registered to your account, then click 'Send Reset Link.'
- 4 Open your email inbox. A message titled 'Reset Your Password' will arrive within 2 to 5 minutes from the sender no-reply@example.com.
- 5 Click the blue 'Reset My Password' button inside that email. This unique link remains valid for exactly 30 minutes from the time it was sent.
- 6 On the secure reset page, enter a new password. It must be at least 8 characters long, and include at least one numeric digit and one special character such as # or \$.
- 7 Click 'Confirm New Password.' You will be automatically logged into your account dashboard.

Article: What To Do If The Reset Link Has Expired

Reset links are intentionally time-limited to 30 minutes as a security measure. If you attempt to use an expired link, the page will display the message: 'This link has expired. Please request a new one.' There is no way to extend or reactivate an expired link. Instead, simply return to the login page and repeat the request process described above to generate a brand new link. There is no limit on how many times you may request a new reset link in a 24-hour period, though each request will invalidate any previously sent link automatically.

Article: Password Requirements and Security Standards

All new passwords created through the reset flow must satisfy the following minimum requirements:

- Minimum length of 8 characters (maximum length of 64 characters).
- At least one uppercase letter (A through Z).
- At least one numeric digit (0 through 9).
- At least one special character, such as ! @ # \$ % or &.
- The new password cannot be identical to any of your previous 5 passwords used on this account.

Article: Troubleshooting - Reset Email Never Arrives

If the password reset email does not appear in your inbox after 10 minutes, work through this checklist in order:

- Check your Spam, Junk, and Promotions folders, as automated security emails are sometimes filtered there by email providers.
- Confirm you entered the exact email address that is registered on the account. A common mistake is using a personal email when the account was registered with a work email, or vice versa.
- If your account was originally created using a 'Sign in with Google' or 'Sign in with Apple' button, it does not have a separate password stored in our system, and no reset email will be sent. In this case, return to the login page and use the original 'Sign in with Google' or 'Sign in with Apple' button instead.
- Add no-reply@example.com to your email contacts or safe sender list to prevent future filtering issues.
- If none of the above resolves the issue after 30 minutes, this should be escalated to a human support agent for manual account verification.

Article: Recovering Account Access Without Email Access

If you no longer have access to the email address on file (for example, it was a former work email from a previous employer), the standard automated reset process will not work, since it depends on email access. In this situation, account recovery must be handled manually by our support team, who will verify your identity using alternative methods such as confirming billing information, account creation date, or recent activity details. This manual process typically takes between 24 and 48 hours to complete and cannot be expedited through self-service tools, as it requires careful identity verification to prevent unauthorized account takeover.
